# CP price comparison table and VN-Index

# P/E and VN index comparison table

#### **Valuation**

- NKG is being traded at PE FW = 4.7x relatively cheap compared to stocks in the same industry.
- BSC recommends **BUY NKG** with **1-year target price of 60,400 VND/share** equivalent to upside 18% compared to the price on 10/03/2022 based on P/E valuation method with target PE = 5.5x.

# Forecasting business results

In 2022, BSC forecasts NKG's net profit and **net profit** of **VND33,788 billion (+20 % YoY)** and **VND2,399 billion (+7.8% YoY) respectively**, **EPS FW = 10,985 VND/share** based on the following assumptions: (i) Consumption of all kinds of steel + 25.7 % yoy, (ii) Gross profit margin -1% yoy due to HRC price -5% yoy.

### Investment perspective

- Consumption volume increased thanks to the increase in capacity of galvanized steel sheet (+30%). The export market still plays an important role in the revenue structure (80%) due to (1) the high import demand of developed countries; (2) production cost advantage in Vietnam.
- Profit margin decreased due to: (1) high competitive pressure in the export market and (2) fluctuations in input material prices.

#### Risk

- Steel selling price dropped more than forecast -5% yoy;
- Raw material prices fluctuated stronger than forecast.

# **Business Update**

- Total consumption of steel products in 2021 is estimated at 1.15 million tons (+64% YoY), of which galvanized steel production will reach 978 thousand tons (+74%yoy), pipe steel output will reach 173 thousand tons (+22% yoy).
- Galvanized steel sheet exports accounted for 74% of total consumption, reaching 719 thousand tons.

## **BUSINESS UPDATE**

NKG's business results in 2021 showed impressive growth (Net sales reached VND28,173 billion, +144% yoy and NPAT at VND2,225 billion, +654%) with the main contribution from the export of galvanized steel sheet .

Table 1: Summary of business results for 4Q2021 for the whole year of 2021

#### **BUSINESS OUTLOOK 2022**

#### **GALVANIZED STEEL EXPORT IS FOCUSED IN THE COMING TIME**

53%

2020

2021

47%

2019

The export market is the focus of NKG's sales strategy. The company has always maintained a high proportion of exports of galvanized steel in the past few years, and especially promoted exports when the Covid-19 epidemic broke out, disrupting the steel supply chain and flat steel prices in EU and North America increased sharply.

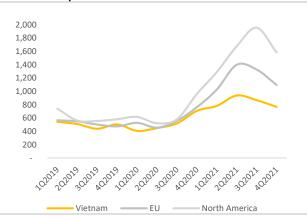

Figure 1: The share of exports in total consumption of galvanized steel increases sharply in 2021

64%

2018

Figure 2: The sharp increase in HRC (input material for flat steel) prices in the EU and North America creates a large gap with domestic prices

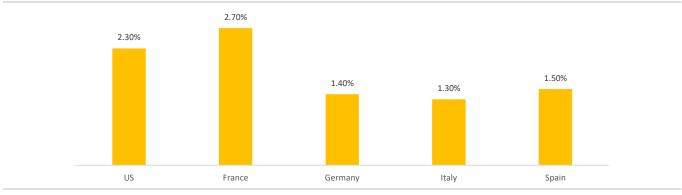

Source: NKG, Bloomberg, BSC Research

BSC believes that NKG will continue to maintain the export proportion of galvanized steel at 80% in 2022 based on the following factors: (1) demand in the EU and North American markets remains high and (2) production cost advantage remains at least until the end of 2Q2022.

- (1) Steel demand in the EU and North American markets will continue to be high as (i) these countries all have plans to invest in large-scale infrastructure upgrades; (ii) the Russian-Ukrainian conflict may disrupt steel supply in the EU.
  - (i) Developed countries in the EU and the United States both plan to deploy large public investment packages in infrastructure to support economic recovery after the epidemic. The US is expected to invest \$2.2 trillion between now and 2030, while the size of investment packages in the EU is smaller and the implementation time is shorter, but also up to 750 billion euros. We believe that the deployment of investment in infrastructure will stimulate demand for steel in these markets.

Figure 3: Size of economic stimulus packages in EU and US (% GDP)

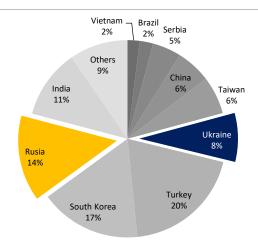

Source: Allianz, BSC Research

(ii) Conflict Russia - Ukraine may disrupt steel supplies in the EU. Russia and Ukraine account for a large proportion of steel exports to the EU (22% of EU flat steel imports). Escalating tensions in this region have provoked EU countries against Russia with economic sanctions. We believe that the embargo on Russia's steel exports to the EU and the US, if it happens, will create a great deal of room for Vietnamese steel producers to exploit, especially the galvanized sheet manufacturers.

Figure 4: Russia and Ukraine account for a large proportion of flat steel export partners to the EU

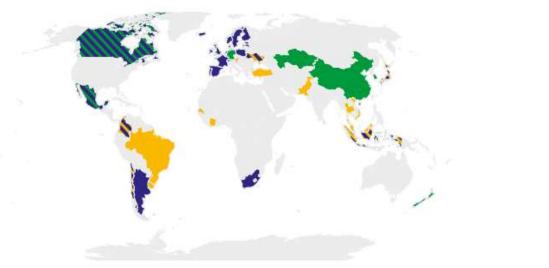

Source: Eurofer, BSC Research

- (2) The advantage of low production costs is still maintained in the short term thanks to: (i) the management policy for the steel industry in Vietnam is more favorable than in the importing countries; (ii) the trend of clean steel production makes some major exporting countries more affected when scrap steel prices increase; (iii) domestic supply of HRC is expected to increase slightly.
  - (i) Environmental impact management policy for the steel industry in Vietnam is looser than in the importing country. Steel supply in developed countries such as the EU and North America is limited by policies to reduce carbon emissions to protect the environment. The standard carbon price in the EU emissions trading system is at 65.07 USD/ton and is expected to increase to 81.36 USD/ton in 2022 (according to Reuters), making production costs in the EU 110-150 USD/ton higher than that of the EU. with Vietnam (assuming BOF blast furnace technology is used).

Figure 4: Most developed countries have adopted carbon emission control measures

Green: ETS applied (\*)
Gold: Consider ETS/Carbon Tax
(\*) Maximum emission limit

Purple: Consider a Carbon Tax
Blue with purple stripes: ETS and Carbon Tax applied
Purple striped yellow: Applied Carbon Tax, considering ETS

Source: World Bank, BSC Research

(ii) The trend of clean steel production makes steel production costs in other major exporting countries more affected when scrap steel prices increase. Large steel exporting countries such as Turkey or South Korea are increasingly using electric furnace technology (EAF) in steel production to limit carbon emissions, of which scrap steel accounts for more than 70% of the input material cost. This causes scrap steel demand to skyrocket, pushing scrap prices to rise above the average level in 2021.

Figure 6: Electric furnace (EAF) steelmaking technology accounts for a large proportion of Turkish steel production

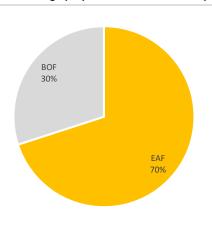

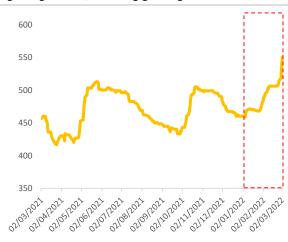

Figure 7: Scrap prices have risen sharply since the beginning of 2022, reflecting growing demand

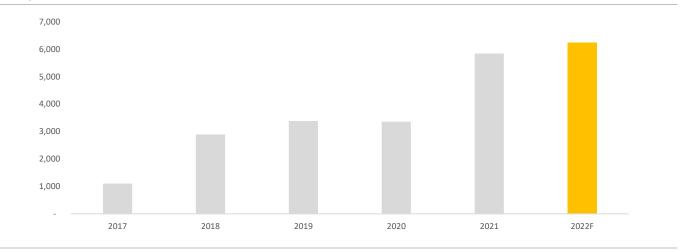

Source: Kallanish, Bloomberg, BSC Research

(iii) The domestic supply of HRC is still guaranteed because Hoa Phat Group (one of the only two domestic HRC manufacturers) maintains its domestic sales policy. Therefore, we believe that the supply and price difference of input HRC are still attractive enough for Vietnam's galvanized steel exporters.

Figure 8: Domestic HRC supply in 2022 is expected to increase slightly when HPG's factory is operating at full capacity (thousand tons)

Source: Fiinpro, BSC Research

We believe that when consumption demand in key export markets remains high, NKG will benefit from its large export market share. NKG is in the top 2 largest exporters of coated steel sheets in Vietnam (after Hoa Sen Group) and has an increase in market share in 2021 (NKG's market share increased by 3%, while Hoa Sen's market share decreased by 7%). We believe that NKG's market share will continue to increase in 2022 as the company plans to increase its galvanized steel sheet capacity from 1 million tons/year to 1.3 million tons/year, which is expected to be completed in Q2/2022.

BSC estimates, if the enterprise completes the project to increase capacity as expected, **the consumption of galvanized steel sheet of NKG will be +30% yoy**.

Figure 9: NKG is in the top 2 exporters of galvanized steel sheet

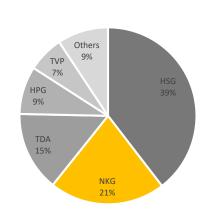

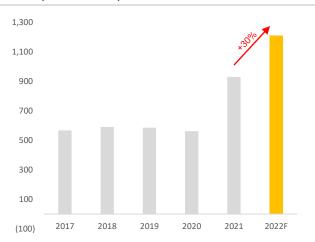

Figure 10: Galvanized steel sales volume forecast +30% yoy in 2022 (thousand tons)

Source: Fiinpro, BSC Research

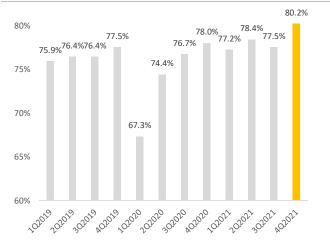

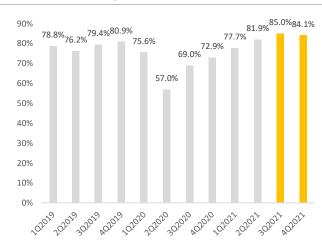

#### COMPETITION INCREASES, BUT THE PRICE OF MATERIALS ARE MOVING IN A BENEFITS FOR NKG

We believe that competition among steel exporters will increase in 2022. The high rate of vaccine coverage in major steel-producing countries facilitates the reopening of production. Competitors' steel output gradually recovered to pre-pandemic levels, causing flat steel prices in the export market to gradually decrease.

Figure 11: Factory efficiency in China increased to the highest level in the past 2 years

Figure 12: Performance of steel mills in the US gradually recovers when the epidemic is under control

Source: CNBS, Fred, BSC Research

Raw material prices are moving in favor of NKG.

HRC price fluctuations have a great influence on NKG's gross profit margin. Although HRC is the main input to the production of galvanized sheet and steel pipes, NKG has the ability to pass on the increased raw material costs into the selling price of the finished product and, in the past, stockpiling helped increase NKG's gross profit margin when the price of HRC rose sharply.

Figure 13: NKG's gross profit margin tends to move in the same direction as HRC price (USD/ton)

Source: Fiinpro, Bloomberg, BSC Research

**HRC price is a short-term support factor for NKG.** HRC price reverses when input material prices such as iron ore, coke and scrap steel suddenly increased sharply since the beginning of 2022 due to the recovery of consumption demand in steel exporting countries, and the fear of thermal coal supply of Russia (the third largest coal reserves and accounts for 4.5% of the world's mined output) disrupted by embargoes. We believe that

NKG will benefit from the increase in HRC price as the company accumulates large inventories at high steel prices in the second half of 2021.

04/01/2021 04/02/2022 04/2/2022 04/11/2021

Coking coal, CFR China

Figure 14: The price of input materials has increased sharply since the beginning of 2022

Source: Bloomberg, BSC Research

However, we also note that the price increase of raw materials is being largely influenced by the tension between Russia and the West, and governments will take measures to curb the increase in the long term. In China - a country that imports 67% of iron ore and consumes 50% of the world's coal (according to OEC and IEA) - the government has recently adjusted iron ore speculation, as well as imposed a ceiling price – floor price when trading coal at some major seaports of this country. In the medium to long term, iron ore supply will recover as major suppliers in Australia and Brazil restore production to pre-pandemic levels , but coal supply has not yet met demand, so we expect The average HRC price in 2022 -5% yoy causes NKG's profit margin to decrease by 1% compared to 2021.

Iron ore, FOB Australia

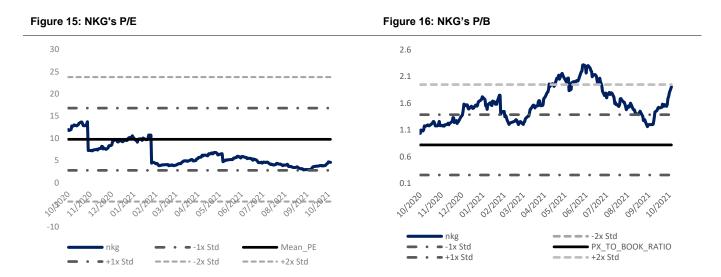

## FORECAST OF BUSINESS RESULTS

BSC forecasts NKG's net sales and net income in 2022 at VND33,788 billion (+20% YoY) and VND2,399 billion (+7.8% YoY), EPS FW = 10,985 VND/share based on the following assumptions: (i) Steel sales volume +25.7% yoy, (ii) GPM -1% yoy due to HRC price -5% yoy.

#### **VALUATION**

NKG stock is currently trading at a PE FW of, in our estimation, only 4.7x. This valuation is relatively cheap compared to stocks in the same industry.

We use the P/E method, with a target PE of 5.5x - the same as the average PE over the previous period for this stock. With EPS 2022 FW forecast at VND10,985/share, we recommend **BUY** for NKG stock with a target price of **60,400 VND/share**, equivalent to an **upside of 18%** compared to the closing price on 10/03/2022.
