### GLOBAL STOCK MARKETS

#### Markets Sustain Recovery Momentum Following U.S.–UK Trade Agreement Announcement

The preliminary trade deal between the United States and the United Kingdom marks the first notable breakthrough since the U.S. imposed its new tariff regime, providing support for the ongoing rebound in global equity markets.

U.S. equity indices have gained an average of 7% this month, trimming year-to-date losses to just 3.7%.

- In the five trading sessions ending May 9, U.S. stock indices moved sideways. Elsewhere, EU600 rose by +0.2%, Nikkei 225 gained +1.5%, and China's CSI 300 added +1.0%.

- The commodity index rose by +1%, driven by energy (oil +4.5%) and metals (gold +2.7%, silver +1.8%, tin +7.0%, lead +1.9%), while several agricultural commodities declined (wheat -2%, cotton -4%, potatoes -8%).

- The U.S. Dollar Index (DXY) ended its multi-week downtrend, rising +0.4% to above 100 points, alongside a modest increase in the 10-year U.S. Treasury yield to 4.38%.

At its May policy meeting, the Federal Reserve held interest rates steady at 4.25%–4.5%. While some Fed officials expressed concerns that the tariff scenario could trigger stagflation, the majority of members agreed that the Fed is well-positioned to remain patient and adjust policy as needed. Despite a strong trade surplus dragging Q1 GDP growth to -0.3%, the Fed maintains its view that the U.S. economy continues to expand at a solid pace, supported by a resilient labor market. Investors currently assign a 20% probability of a rate cut in June and 56% in July, with expectations for three rate cuts by the Fed in 2025.

Key data to watch next week: China: M2 money supply, new loan issuance, retail sales, industrial production.

Australia: Unemployment rate. UK: GDP growth. U.S.: CPI, retail sales, jobless claims.

## Commodity markets' movements

Commodities	Unit	09/05/2025	% Day	%Week	% Month	% Year

### VIETNAM STOCK MARKET

#### Broad-Based Market Rebound Post-Holiday

The VN-Index surged by 3.3%, with liquidity up by 22% following the holiday period. However, trading value remained at average levels, comparable to the week prior to the holiday. While sector rotation was clearly visible and foreign investors returned to net buying, these factors were not strong enough to drive a full recovery in growth-oriented flows to match the index's rebound.

- VIC-related stocks maintained solid upward momentum, accounting for 34% of the VN-Index's gain. Large-cap stocks that had seen significant declines recently—such as GVR, FPT, GAS, and BSR—also recovered well.

- The market posted broad-based gains, with all 18 sectors advancing. Notable sector rotation was observed, with real estate, oil & gas, and chemicals posting gains of over 8%.

- Foreign investors turned net buyers, with a net inflow of USD 49 million after several weeks of net selling.

As of May 9, 1,116 listed companies across the three exchanges had released earnings results. Net profit (PAT) growth stood at +24.1% YoY for the overall market, +13.3% YoY for HOSE, and +17.2% YoY for VN30. This reflects a cyclical slowdown from Q4/2024 YoY, but still marks a 2.5x increase compared to Q1/2024 YoY. The uptrend in both quarterly and annual earnings growth YoY continues to strengthen after bottoming out in Q1/2023. By sector, Retail, Real Estate, Utilities, Chemicals, Information Technology, Basic Resources, and Personal & Household Goods reported strong Q1 YoY earnings growth of 72.8%, 56.3%, 48.7%, 37.9%, 36.4%, 28.1%, and 27.8%, respectively—well above the market average, with clear divergence as 6 out of 19 sectors posted negative growth.

With the upcoming National Assembly session and ongoing trade negotiations, the market's next move—particularly as the VN-Index approaches key resistance levels—remains highly sensitive. The market is fragmented, liquidity remains limited, and momentum is concentrated in a few large-cap names, so investors are advised to maintain a moderate portfolio allocation and adopt a flexible short-term strategy.

## WEEKLY TOPIC: *Impact of EVN's Average Retail Electricity Price Hike in May 2025*

On May 7, 2025, Vietnam Electricity (EVN) issued Decision No. 599/QĐ-EVN regarding the adjustment of the average retail electricity price. Subsequently, on May 9, 2025, the Ministry of Industry and Trade (MOIT) released Decision No. 1279/QĐ-BCT, stipulating the new pricing framework. Accordingly, the average retail electricity price is set at VND 2,204.0655/kWh (excluding VAT), effective from May 10, 2025. This adjustment represents a 4.8% increase compared to the current average retail electricity price.

### 1. Electricity Price Hike Information and Adjustment Frequency Statistics

- Before 2015: Electricity prices were adjusted once every three years, with large adjustment margins.
- 2015–2019 period: Prices were adjusted once every two years with more stable increases, averaging 7.31% per adjustment.
- 2020–2022 period: Electricity prices were kept unchanged to support the economy amid external shocks such as COVID-19 and the Russia–Ukraine conflict.
- 2023–2025 period: Prices have been adjusted upward by around 5% per adjustment. In particular, two adjustments were made in 2023, one in 2024, and the first adjustment of 2025 took effect on May 10, 2025.

It is evident that since 2023, electricity price adjustments have become more moderate in both scale and frequency, reflecting a policy approach aimed at supporting economic

Additionally,

- For service business customers (approximately 574,000 customers), the average monthly increase per customer is VND 332,000.
- For industrial customers (around 1.98 million customers nationwide), the average additional monthly cost per customer following the price adjustment is VND 677,000.
- For administrative and public service customers (a total of 719,000 customers), the average monthly increase per customer is VND 125,000.

## WEEKLY TOPIC: Impact of EVN's Average Retail Electricity Price Hike in May 2025

### 2. Reasons for EVN's Electricity Price Hike in May 2025

- **Rising electricity production and procurement costs:** According to EVN, in order to ensure a stable electricity supply for socio-economic development and household consumption, the commercial electricity demand is projected to grow by 12.2% YoY in 2025, with the total system output expected to increase by approximately 33.6 billion kWh compared to 2024. In terms of power source structure, low-cost hydropower is expected to contribute only about 25% of the system's total output in 2025, while the remaining 75% must come from high-cost sources such as coal-fired, gas-fired, oil-fired, and renewable energy. Notably, the additional electricity supply will require mobilization from costlier sources, including oil-fired thermal plants, LNG-based gas turbines, and imported coal-fired power. Moreover, the rising USD/VND exchange rate since late 2024 has significantly pushed up costs in the power generation segment—which accounts for around 83% of the total electricity production cost.

- **Mounting financial pressure on EVN:** EVN has reported net losses for two consecutive years (2023–2024), amounting to VND -22.57 trillion and -27.85 trillion, respectively.

- **Subdued inflation pressure in 2025:** Supported by: **(1)** Declining domestic fuel prices in line with falling global oil prices; **(2)** Lower rice prices thanks to stable supply; **(3)** Moderate domestic consumption growth at +9.95% YoY in 4M2025, which is below the 2015–2019 average of +10.81% YoY.

### 3. Impact of EVN's Electricity Price Hike on Vietnam's CPI in 2025

- **First-round effect:** According to the General Statistics Office (under the Ministry of Finance), the 4.8% electricity price increase is expected to raise the Consumer Price Index (CPI) in 2025 by approximately 0.09 percentage points.

- **Second-round effect:** Higher electricity prices will directly increase production and living costs across the economy, thereby pushing up the general price level and contributing to higher inflation. However, this second-round impact typically occurs with a lag.

Given that inflation remains stable (averaging 3.2% YoY in 4M2025) and upward pressure is relatively low for the year, BSC maintains its forecast for average 2025 inflation at **3.18%–4.5%** YoY.

### 4. Headroom for Electricity Price Increases by EVN

Compared to regional countries and key export competitors to the U.S., Vietnam's electricity prices remain highly competitive, particularly for industrial users, where Vietnam ranks as the second lowest among peer countries. This factor enhances the competitiveness of Vietnam's exports and serves as a positive driver for attracting FDI inflows.

Table 03: Comparative Electricity Prices Across Countries

Countries	Average Residential Electricity Price during 2023–2025 (unit: USD/kWh)	Ranked from lowest to highest	Average Industrial Electricity Price during 2023–2025 (unit: USD/kWh)	Ranked from lowest to highest

### Comments:

- In week 18, the SBV issued bills worth 00.0 billion VND, and simultaneously bought securities worth 37,294.3 billion VND. In total, the SBV's net flow on OMOs was 3,545.9 billion VND
- The average overnight interbank interest rate has rebounded to the 4–4.5% range.

## TECHNICAL ANALYSIS: *The VN-Index is approaching resistance zones, with sluggish improvement in market liquidity*

**Daily Chart Overview:** The VN-Index posted four consecutive gaining sessions following the holiday break, accompanied by a slight improvement in liquidity. The index broke above the 200-day SMA on both the daily and weekly charts, but showed signs of stalling near the 50-day SMA and the downward gap formed during the panic sell-off on April 3. The Bollinger Bands have slightly narrowed and are tilting upward, while technical indicators remain at neutral levels.

### Key observations on the daily chart:

- RSI has risen from 47 to 57.
- MACD crossed above the signal line and is approaching the zero level.
- Liquidity increased by 22% compared to the previous week's average session volume.
- The VN-Index is trading above the 20-day and 200-day SMAs, but below the 50-day and 100-day SMAs.

### Conclusion:

After two sessions of consolidation near the previous 1,240 peak, the VN-Index successfully broke out, invalidating the double-top pattern and reinforcing the short-term recovery trend. Despite a late-week pullback upon reaching the 50-day SMA and the gap resistance, the retracement is considered healthy and reasonable following multiple advancing sessions. The index's action has turned more constructive, particularly with the break above the 200-day SMA on both the daily and weekly timeframes. However, market breadth and liquidity remain insufficient to support a rapid move toward the 1,300 resistance zone. A gradually upward consolidation pattern, along with sector rotation, is expected to remain dominant in the coming week. The market may require a decisive directional session and a gap-fill to establish momentum toward retesting the previous resistance area.
