Market outlook

Stock market: VN-Index remained in green in most of the trading time but suddenly turned down at the end of the session. Investment cash flow decreased when only 10/19 sectors increased. Meanwhile, foreign investors were still net sellers on the HSX but turned back to be net buyers on the HNX. The market liquidity increased compared to the previous session, and the market breadth was in equilibrium, showing that the selling pressure is growing as the index moved to peak areas. According to our assessment, VN-Index may continue to maintain below the threshold of 960 in the next few sessions.

Future contracts: Except for VN30F2011, all future contracts increased in contrast with VN30. Investors might consider selling with target price around 905 points for long-term contracts.

Covered warrants: In the trading session on November 10, 2020, majority of coverred warrants increased in contrast with underlying securities. Trading value increased strongly.
