Market outlook

Stock market: VN-Index had an increasing day from the beginning of the morning session to the end of the afternoon session and is now back to close to the threshold of 960 points. Investment cash flow increased with 15/19 sectors gaining. Meanwhile, foreign investors were still net sellers on both HSX and HNX. Although the market breadth was in a positive status, the market liquidity continued to decline compared to the previous day, showing that there are still potential risks in gaining sessions. According to our assessment, the VNIndex is likely to have a correction on the last trading day of the week.

Future contracts: All future contracts increased following VN30. Investors might consider selling with target price around 910 points for long-term contracts.

Covered warrants: In the trading session on November 12, 2020, majority of coverred warrants increased following underlying securities. Trading value decreased slightly.
