Stock market: VNIndex stayed in green for most of the trading time and is now back to the area above the threshold of 1360. Investment cash flow decreased slightly but still 15/19 industry groups gained. Meanwhile, foreign investors are still net selling on both HSX and HNX. Besides, market breadth moved to equilibrium with liquidity not much different from the previous session. According to our assessment, VN-Index may appear wobbly when approaching the historical peak area in the next sessions.

Technical Analysis FRT_Positive signal

Technical highlights:

- Current Trend: Upward.
- MACD trend indicator: Positive divergence, MACD crosses the signal line.
- RSI indicator: neutral zone, uptrend.

Outlook: FRT is forming a recovery period after short-term consolidation at the bottom 24.0. Stock liquidity exceeded the 20-day average in the latest session, in alginment with the stock uptrend. The MACD and the RSI both support this short-term recovering trend. The stock price line is also approaching the Ichimoku cloudband, showing that a mid-term uptrend is forming. Investors may consider opening a position around the price threshold of 27.0 and take profit when the stock approaches the threshold of 32.0. Stop loss if the 25.0 support level is lost.
